FLOVA

FLOVA

ICON

ICON

FLOVA

Timeless, by Design

Design that endures is not defined by passing trends, but by a lasting clarity of proportion, function and detail.

ICON is built around pure circular geometry, with finely knurled details integrated into handles and controls to create a distinctive visual and tactile signature. Restrained lines, clearly defined functions and a consistent design language extend across basin, bath and shower, allowing every element to belong naturally within the same collection while retaining its own purpose.

Timeless design does not mean standing still. Flexible concealed systems, more intuitive controls and continually evolving water experiences allow ICON to respond to contemporary spaces and the way we live today, while preserving the purity at the heart of its design.

Timeless in form. Evolving in experience. ICON finds a natural balance between enduring design and contemporary living.

Innovating Water Experiences

Rhythm in Detail

A Distinctive Signature Across the ICON Collection.

Fine, precisely repeated lines give ICON its distinctive visual rhythm. Inspired by the order of architectural surfaces, the knurled detail adds depth and definition to the collection's pure cylindrical forms.

Repeated across handles and controls, it becomes a signature of ICON — connecting individual pieces through one consistent design language.

Tactile Grip Design, Precise Control

The moment the hand meets the control, ICON reveals another dimension of its design. The finely knurled surface offers a reassuring grip, making every adjustment feel natural and precise.

More than a visual signature, it is a detail designed to be experienced — where form, touch and function come together.

Award-Winning GoSlide® Systems

2-Outlet GoSlide® Diverter

2-Outlet GoSlide® Controllers

3-Outlet GoSlide® Controllers

reddot winner 2026

Award-Winning Design, Recognized by Red Dot

Winner of the 2026 Red Dot Design Award, GoSlide® is recognized for its refined design, intuitive functionality and seamless integration. It is also featured in the Red Dot Design Yearbook, marking another milestone in FLOVA's pursuit of original design and innovation.

A Simpler Approach to Water Control

GoSlide® features an innovative sliding control system, replacing the conventional pull-up diverter. A simple sliding action enables intuitive switching between water outlets, creating a smoother experience and a cleaner, more integrated design.

Precise Temperature Control— Stable within ±1°C

The thermostatic technology keeps water temperature fluctuations within ±1°C, helping reduce sudden changes in temperature and the risk of accidental scalding. It provides a more stable, comfortable and reassuring shower experience for the whole family.

GoSlide® — Making showering more enjoyable.

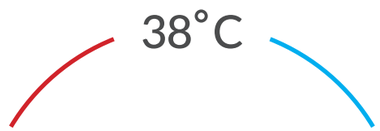

Watch Video

Flova GoSlide® shower combines a linear slide control with precise temperature regulation and a clean, minimalist look. The innovative slider allows for a seamless transition between water sources with a single movement and replaces traditional diverters. Thermostatic technology keeps the water temperature constant. The brass body ensures longevity and resistance to corrosion.

Complete Peace of Mind

Safety for the Entire Family.

Safety is always our top priority, especially in the bathroom. With Flova's thermostatic anti-scald technology, we provide an added layer of protection to keep your family safe. Our system maintains a consistent water temperature and includes a safety override set at 38°C, effectively preventing accidental scalding from sudden spikes in heat. Every shower is a safe, comfortable experience, giving you the peace of mind that comes from knowing our products are engineered with safety at their core. Whether it's for children, the elderly, or anyone in between, Flova ensures your bathroom is a secure environment where comfort and safety go hand in hand.

Engineered to Last

Total Shower Confidence.

800,000
Cycles

Patented cartridge
Built to last

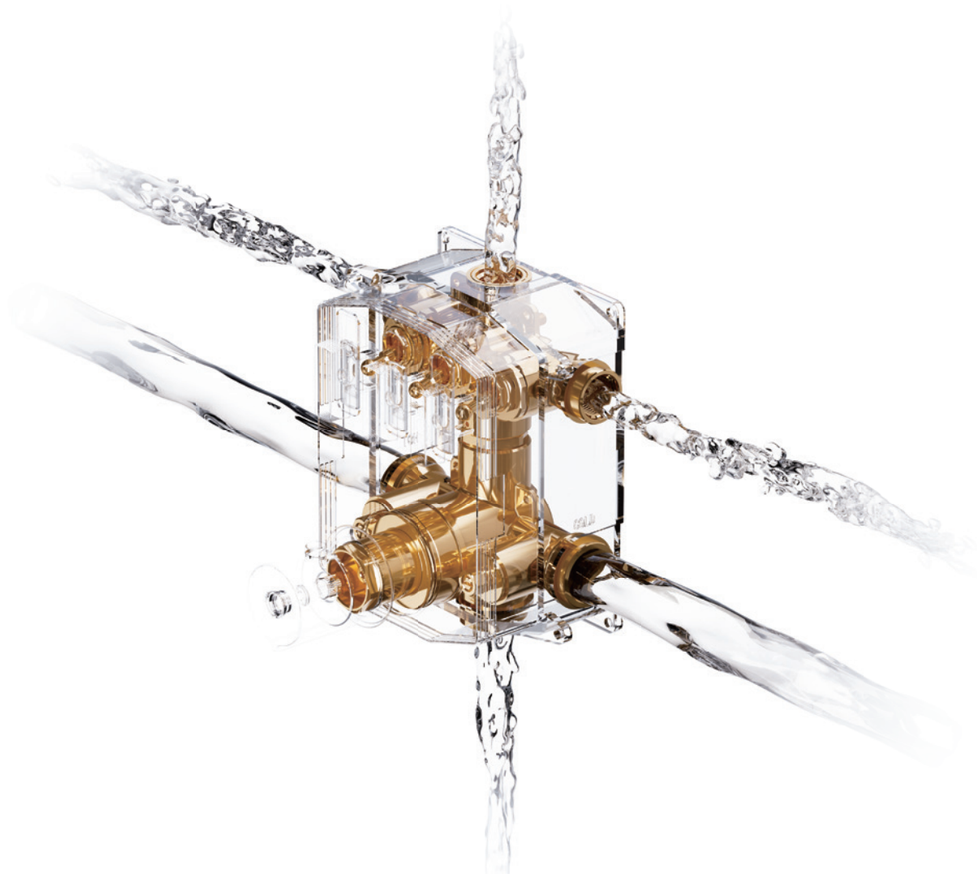

70

Pressure-tested
up to 70 bar

25
L/Min

High-flow performance
at 3 bar per outlet

GoSlide® features Flova's patented cartridge (Patent: EP24173172.8), precision-engineered for high performance and long life. Tested to withstand 70 bar pressure and over 800,000 cycles, it delivers reliable, uninterrupted flow-ideal for multi-outlet and high-rise plumbing systems.

One Button, Two Outlets

Seamless Adjustment, Precise Control

An innovative GoSlide® dual-outlet diverter brings two water outlets into a single button, reducing the number of controls for a cleaner, more refined interface.

A gentle slide switches between outlets, while a separate lever controls on/off and flow. Outlet selection and flow adjustment remain independent, making every interaction clear, intuitive and effortless.

Overhead Shower

Hand Shower

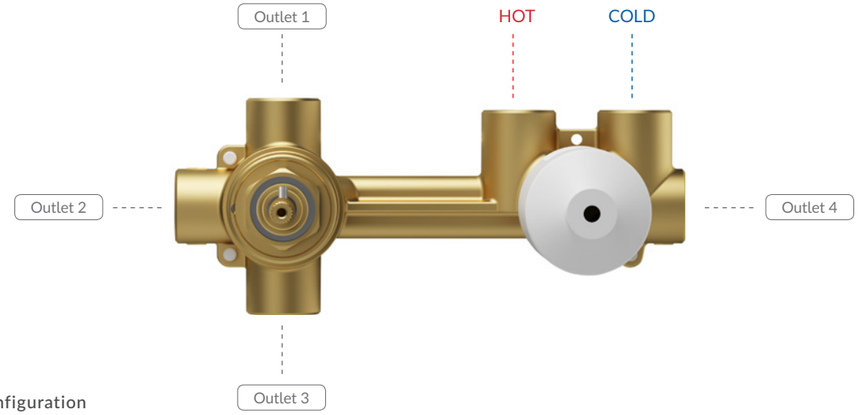

More Freedom in Water

FLOVA's new concealed valve system is engineered for greater flexibility, allowing configurations for two, three or four water outlets to suit different bathroom layouts and water-use requirements.

Consistent spacing between controls and uniformly sized trim plates create a clean, balanced visual order across different functions. With a streamlined system enabling a wider range of water configurations, it gives designers greater freedom to shape the bathroom around individual needs.

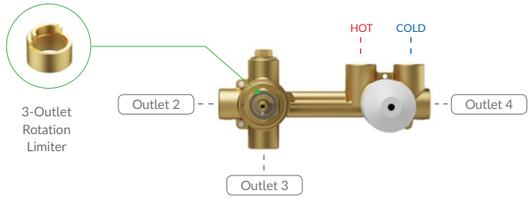

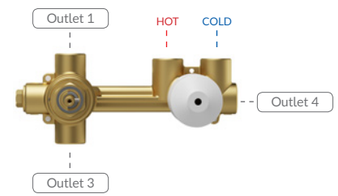

One System, Multiple Possibilities

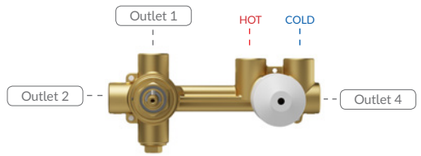

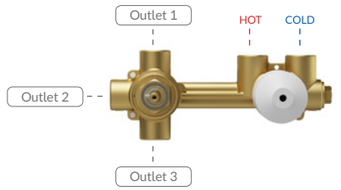

4-Outlet Configuration

3-Outlet Configuration

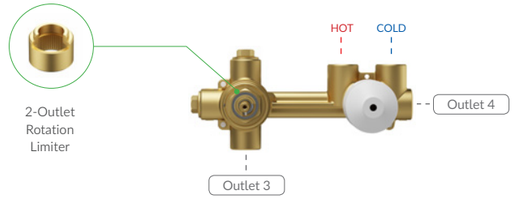

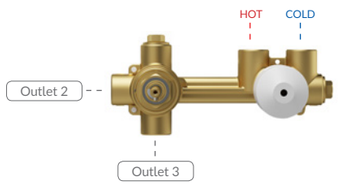

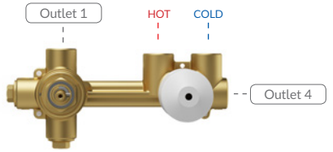

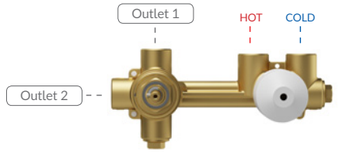

2-Outlet Configuration

The Shower Stops. So Do the Drips

No Drips. Less Limescale. More Comforts.

Redefining the standard for overhead showers by combining an innovative internal structure with precise flow control, Flova's new overhead design delivers instant water shut-off and exceptional limescale resistance. From the first drop to the final pause, every shower is clean, efficient, and effortlessly comfortable.

Surrounded by Water. Wrapped in Comfort

Watch Video

The 270 precisely arranged silicone nozzles deliver a soft, even flow that gently adheres to the skin, enveloping it like a fine mist. The result is a refreshing, non-stinging shower experience that feels both soothing and invigorating. The silicone outlets are also stain-resistant and easy to maintain — a simple wipe keeps the surface clean and restores its original performance.

Diamond Chrome Quality Finish

Dual nickel layers for durability.

Flova's unique electroplating process is engineered to meet the highest industry standards, including EN248 and ASME A112.18.1, ensuring that every product stands up to the rigours of daily use. Our advanced plating technology offers exceptional corrosion resistance, oxidation prevention, and superior wear resistance, ensuring long-lasting performance and aesthetic appeal.

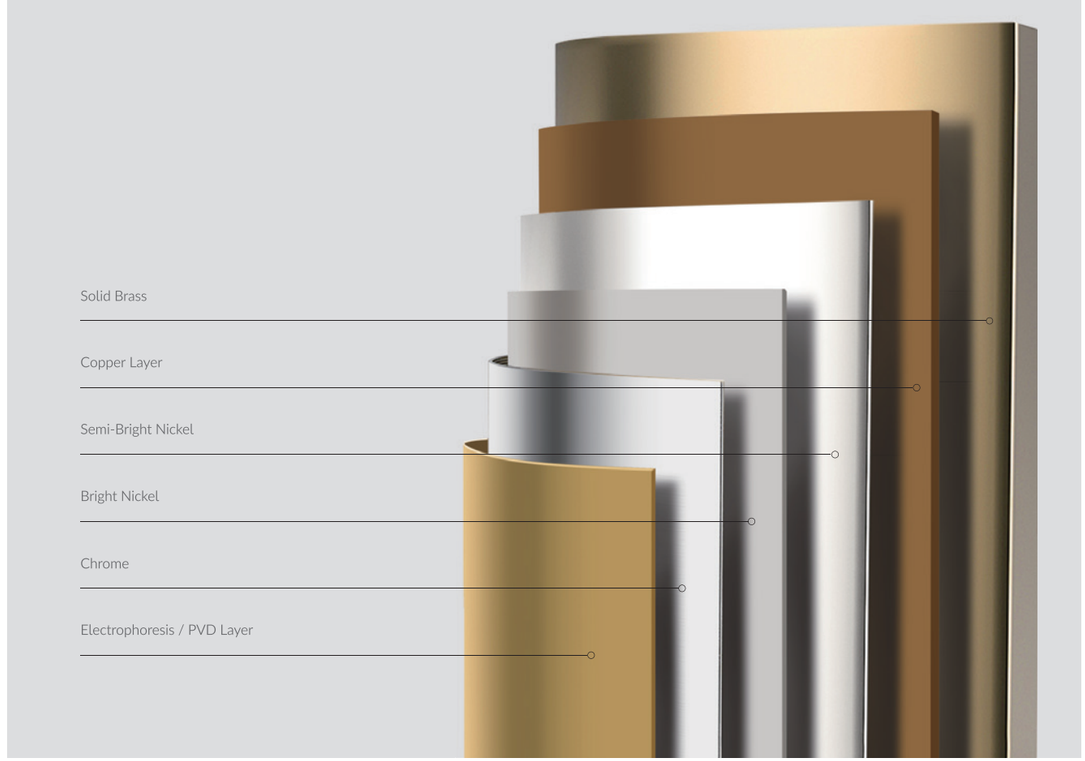

Flova products are finished using a meticulous process that combines a dual nickel layer with a final diamond chrome finish. The dual nickel layers—consisting of a semi-bright nickel for corrosion resistance and a bright nickel—creates a durable foundation that improves protection against wear, tarnishing, and oxidation. Finished with a high-quality diamond chrome layer, this process ensures long-lasting brilliance, resilience, and performance in everyday use.

High Quality Finishes

Colors beyond variety—built to last.

Whether in Chrome or one of our color finishes, the quality remains the same.

Flova offers a wide range of finishes designed to suit every style. No matter the color, each one stands the test of time—corrosion-resistant, wear-resistant, fade-proof, and fingerprint-resistant. Built to last, every finish comes with the reassurance of a 5-year guarantee—the perfect balance of aesthetics, durability, and peace of mind.

Certificates

At FLOVA, we believe true quality begins with care — for your wellbeing and for the world we share. From carefully selected materials to thoughtful design, we place water quality, everyday comfort and lasting performance at the heart of our products.

We are committed to using resources responsibly and creating products to be enjoyed for years. Because quality is more than what you see — it is the reassurance you feel, every day.

Warmth, by Design

Softly brushed rose gold brings a measured warmth to the interior. Set against pale stone, its subtle rosy tone moves between rich red-brown textures and natural light, giving the metal a softer, more inviting presence.

As the light shifts, the finely brushed surface reveals delicate variations of light and shade. Colour becomes more than a finish — it creates a quiet connection between material, light and the experience of the space.

Pure cylindrical forms are paired with a finely knurled handle, adding a distinct tactile detail to the clean silhouette. A single lever brings on/off, flow and temperature adjustment into one intuitive movement, allowing precise, effortless control in everyday use.

The brushed rose gold finish softens the metallic sheen, revealing subtle warmth and texture as the light shifts. Here, even the functional details become part of the design.

Watch Video

FH 9828D-D150-BR
Single lever basin mixer

FH 9858C-6022-BR
Two-handle concealed basin mixer

Spout and control sit apart, reducing everyday water use to its essential elements. With the unnecessary concealed behind the wall, attention returns to material, proportion and water itself.

Warm brushed rose gold is set against vertical textures, while the soft curve of the spout contrasts subtly with the finely knurled control. As function recedes, the space comes forward.

FH 9818C-6022-BR
Two-handle 8" basin mixer

FH 9885-D150-BR
Single lever concealed basin mixer

A pure arc carries water towards the bath, while the controls remain on the wall. Spout and control need not share the same position — each is placed where it serves its purpose best.

Brushed rose gold moves softly through the warm interior, reducing function to a few essential lines. Less presence, more space — allowing the bath to take centre stage once again.

FH 9527-516-BR
Shower bar

FH 8006B-D151-BR
Single lever concealed 6-way bath/shower mixer

FH 8855C-BR
Shower outlet elbow

Waterways are neatly concealed behind the wall, allowing the overhead shower, hand shower and controls to be positioned exactly where they are needed. A clear arrangement of functional elements creates visual order, while pure geometric forms keep every interaction intuitive and natural.

Brushed rose gold reveals soft, subtle variations against pale stone and shifting light. The clean cylindrical hand shower echoes the geometry of the controls, while fine knurling on the control handles adds a distinct tactile detail. Everything has its place, leaving more room for the space itself.

The high-flow GoSlide® control system brings intuitive control to every shower. A simple movement puts generous water flow at your fingertips, making outlet selection and flow adjustment effortless and direct.

The overhead shower features DripFree shower technology, stopping the water quickly after shut-off to minimise residual dripping. From full, even water flow to a clean stop, every moment is designed to feel precise and effortless.

Restrained In Form, Integrated Into Space

With its quiet, neutral metallic character, ICON in brushed nickel reflects a modern approach to purity and restraint. The finely brushed surface softens reflections, maintaining a calm presence between dark stone and pale architectural surfaces — clearly defined, yet never demanding attention.

Pure circular geometry, signature knurled handles and a flexible concealed system carry ICON's consistent design language throughout. From basin and bath to shower, reduced visual interruption and greater freedom of configuration allow each element to become a natural part of the architecture.

FH 9828B-D150-BN
Single lever basin mixer

The experience begins with touch, unfolding naturally from one action to the next. Separate hot and cold controls frame the central spout, giving each adjustment a clear response while preserving the considered ritual of dual-handle operation.

Brushed nickel gives the metal a soft, even presence, bringing a sense of calm to the most frequently touched elements. Rather than combining functions, the design gives each action greater clarity.

FH 9858C-6022-BN
Two-handle concealed basin mixer

FH 9885-D150-BN
Single lever concealed basin mixer

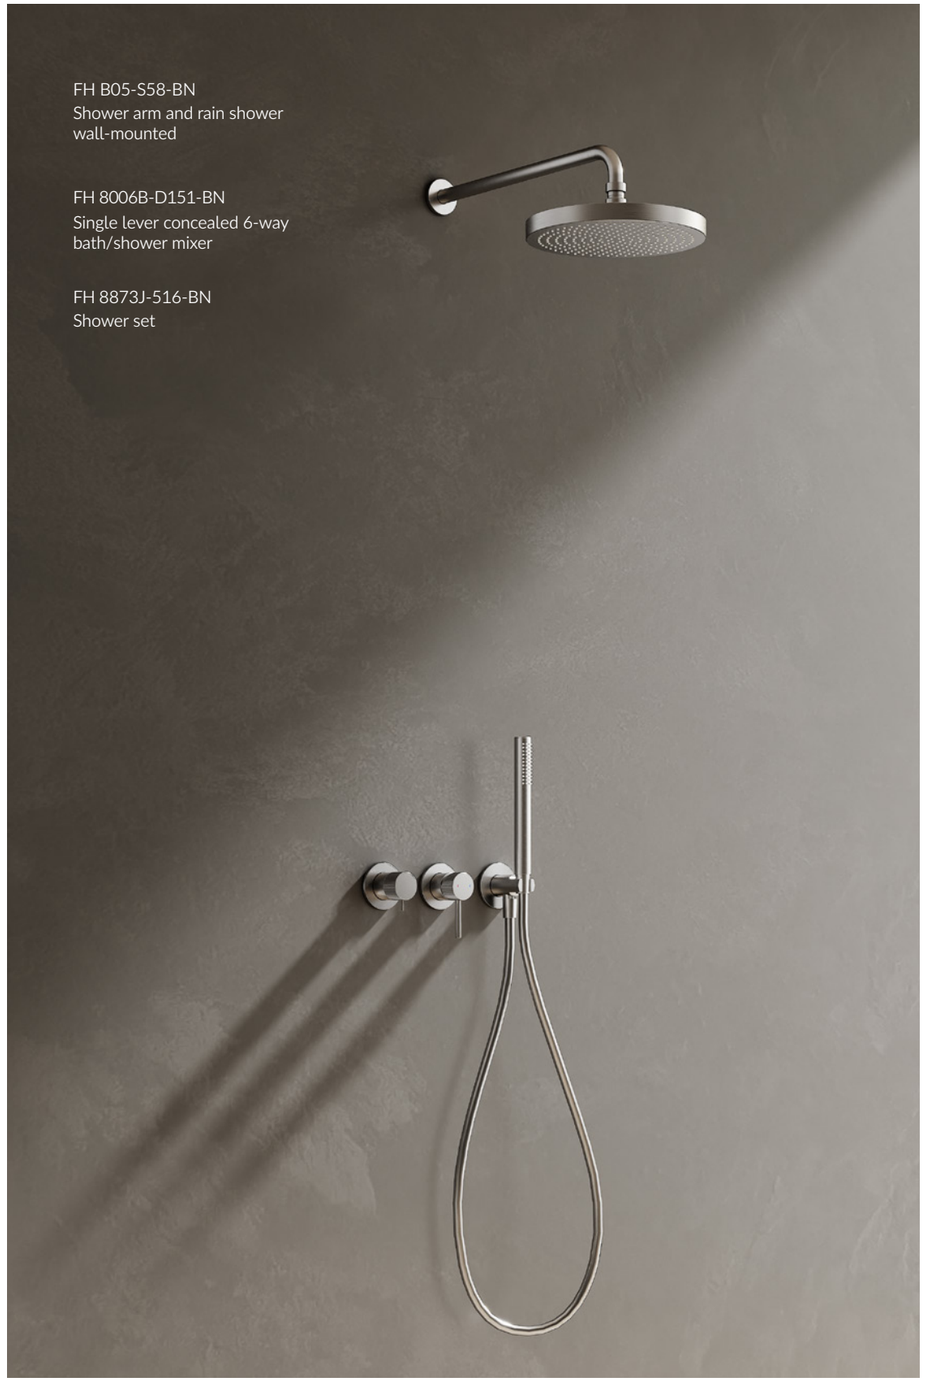

Water falls naturally from above, opening into a full, even flow that surrounds the body. Rather than feeling forceful, the experience is generous and enveloping — a continuous, refined flow designed to make the shower feel complete.

The overhead shower features 270 silicone nozzles and DripFree technology, bringing the water to a quick, clean stop after shut-off while minimising residual dripping. Two GoSlide® controls independently operate two water outlets, making it simple to move between overhead and hand shower.

FH 8873J-516-BN
Shower set

A complete shower experience is defined not only by how the water begins, but also by how it ends. Featuring DripFree technology, the overhead shower stops water quickly after shut-off, minimising residual dripping for a cleaner, more precise finish.

Brushed nickel softens reflections, creating a clear yet restrained contrast against the dark surface. The circular overhead shower, individual controls and hand shower come together through pure geometry — function clearly expressed, never overstated.

FH 8453-6018-BN
Thermostatic shower mixer

Quiet In Tone, Rich In Character

ICON in brushed brass brings a quiet depth of colour to the space. Rather than seeking a bright reflection, its finely brushed surface reveals subtle variations of light and shade, forming a natural connection with materials such as timber and stone.

Pure circular geometry runs throughout the basin, bath and shower collection, while finely knurled handles introduce a distinctive design signature. Flexible product and concealed configurations allow the same design language to adapt across different settings, bringing material, form and function into a coherent whole.

When function is carefully considered, everyday interaction becomes more direct. Water, on/off, flow and temperature control come together in one concise form, responding naturally with fewer movements.

Brushed brass softens the presence of metal, revealing quiet depth as light moves across its surface. Knurling appears only where the fingers meet the control, adding tactile definition while preserving the purity of the silhouette. Less form for its own sake, more of an experience that feels instinctive.

FH 9828D-D150-BB
Single lever basin mixer

FH 9818C-6022-BB
Two-handle 8" basin mixer

FH 9885-D150-BB
Single lever concealed basin mixer

FH 9858C-6022-BB
Two-handle concealed basin mixer

True order does not require every element to sit closer together. Considered space gives each function its own place, creating a more open and balanced rhythm across the basin.

The three-hole configuration separates the spout from the hot and cold controls, balancing its flowing curve with finely knurled handles on either side. Against natural stone, brushed brass brings a subtle metallic texture into dialogue with the material beneath. Proportion, spacing and material come together in a composition that feels naturally resolved.

Designed Around the Space

Every bath relates differently to its surroundings, and its functions need not be confined to fixed positions. The modular concealed design separates the bath spout, hot and cold controls, and hand shower, allowing each element to be positioned according to the bath dimensions and the way the space is used.

Consistently sized circular trim plates create a unified visual language across each individual element. Even with a flexible arrangement, the wall remains clean and composed. Waterways are concealed behind the wall, leaving greater freedom for the space.

Good control should feel instinctive. The GoSlide® two-function shower system features two individual controls for two water outlets, allowing each to be activated and adjusted with a simple slide. Switching between the overhead shower and hand shower feels direct and natural, with every function clearly within reach.

Paired with the DripFree Shower, the overhead shower delivers a full, even flow and stops quickly after shut-off to minimise residual dripping. From start to adjustment to stop, every action is made beautifully simple.

Light, Reflected With Precision

Chrome draws the surrounding light and materials into its surface, shifting subtly between brightness and shadow. Its clear, reflective finish creates a distinct contrast with dark stone, pale travertine and richly veined green marble, allowing the pure geometry of ICON to become a precise yet restrained presence within the space.

Where water, light and architecture meet, the product becomes more than a functional element — it becomes part of the spatial order. Bright, never overstated. Pure, and therefore timeless.

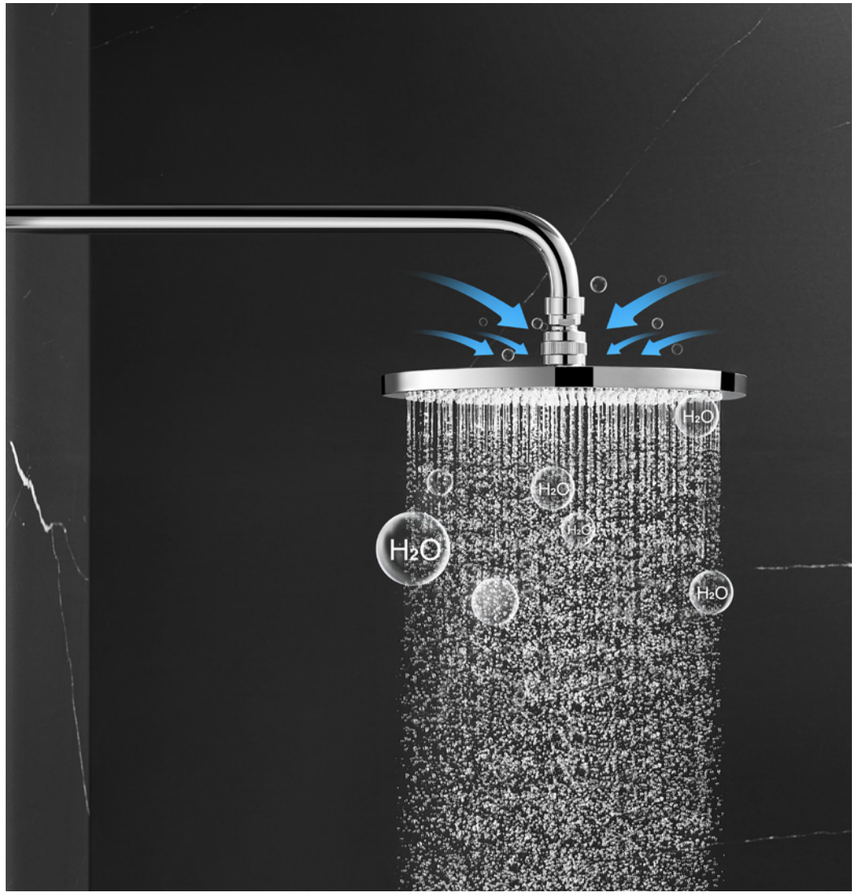

FH 9828B-D150
Single lever basin mixer

Fine knurling is integrated into the control handle, adding tactile depth to the polished chrome surface while providing a clear, secure grip.

A subtle detail, repeated throughout the collection, becomes a distinctive visual signature of ICON.

FH 9885-D150
Single lever concealed basin mixer

FH 9858C-6022
Two-handle concealed basin mixer

The circular overhead shower combines Air-Mix shower technology with a full, gentle flow, distributing water evenly across the body. Individual controls bring clarity to each function, while the overhead shower, hand shower and body jets work together to create a more complete shower experience.

Pure circular geometry connects every outlet and control, bringing visual order to the contrasting surfaces. Technology recedes into simplicity, allowing water itself to take centre stage.
